

Amendments to the Claims:

1-12 (cancel)

13. (currently amended) A system for communicating information comprising:

a mobile communication network for transmitting ~~a~~ first information ~~in a first communication cycle having a first plurality of time slots,~~ and a second information in a ~~second communication cycle having a second plurality of time slots,~~ wherein the first information indicates position of the second information in a target slot in said ~~second~~ plurality of time slots; and

a mobile communication terminal for searching a time slot in the ~~first~~ communication cycle for the first information, and retrieving the second information from the target slot based on the first information,

wherein the first information and the second information are transmitted in a general page message over a single paging channel, such that the mobile communication terminal searches for the first information and the second information in a single communication cycle.

14. (currently amended) The system of claim 13, wherein the first information is comprises position information.

15. (currently amended) The system of claim 13, wherein the second information is comprises a message information.

16. (currently amended) The system of Claim 13, wherein the first information indicates the presence of the second information in the ~~second~~ communication cycle.

17. (currently amended) The system of Claim ~~13~~ 15, wherein the ~~second information message~~ comprises a text message.

18. (currently amended) The system of Claim 13, wherein the second information comprises a mobile-short message.

19. (cancel)

20. (currently amended) The system of Claim 18, wherein ~~the~~ a mobile short message is transmitted in a data burst message.

21. (currently amended) A method for transmitting information from a mobile communication network, the method comprising:

transmitting ~~a~~-first information in a ~~first~~-communication cycle having a ~~first~~-plurality of time slots; and

transmitting ~~a~~-second information in ~~a~~-~~second~~the communication cycle ~~having a second plurality of time slots~~,

wherein the first information indicates position of the second information in a target slot in said ~~second~~-plurality of time slots, such that the second information can be retrieved from the target slot in said ~~second~~-communication cycle based on the first information,

wherein the first information and the second information are transmitted in a general page message over a single paging channel, such that a mobile communication terminal searches for the first information and the second information in a single communication cycle.

22. (currently amended) method of claim 21, wherein the first information is comprises position information.

23. (currently amended) The method of claim 21, wherein the second information is comprises a message information.

24. (currently amended) The method of Claim 21, wherein the first information indicates the presence of the second information in the ~~second~~-communication cycle.

25. (currently amended) The method of Claim ~~24~~ 23, wherein the ~~second information message~~ comprises a text message.

26. (currently amended) The method of Claim 21, wherein the second information comprises a ~~mobile-short~~ message.

27. (cancel)

28. (currently amended) The method of Claim 26, wherein the ~~mobile-short~~ message is transmitted in a data burst message.

29. (original) The method of claim 21, wherein the first and second information are transmitted over a general paging channel.

30. (original) The method of claim 21, wherein the first and second information are transmitted from a mobile communications network.

31. (currently amended) A method for communicating information in a mobile communication network, the method comprising:

receiving a first information in a ~~first~~-communication cycle having a ~~first~~-plurality of time slots; and

receiving a second information in a ~~second~~the same communication cycle ~~having a second plurality of time slots,~~

wherein the first information indicates position of the second information in a target slot in said ~~second~~-plurality of time slots, such that the second information can be retrieved from the target slot in said ~~second~~-communication cycle based on the first information,

wherein the first information and the second information are received as part of a general page message transmitted over a single paging channel, such that a mobile communication terminal searches for the first information and the second information in a single communication cycle.

32. (currently amended) The method of claim 31, wherein the first information is comprises position information.

33. (currently amended) The method of claim 31, wherein the second information is comprises a message information.

34. (currently amended) The method of Claim 31, wherein the first information indicates the presence of the second information in the ~~second~~-communication cycle.

35. (currently amended) The method of Claim ~~31~~ 33, wherein the ~~second information~~ message comprises a-text message.

36. (original) The method of Claim 31, wherein the second information comprise a mobile short message.

37. (cancel)

38. (currently amended) The method of Claim 36, wherein the ~~mobile~~- short message is transmitted in a data burst message.

39. (original) The method of claim 31, wherein the first and second information are transmitted over a general paging channel from a mobile communications network.

40. (original) The method of claim 31, wherein the first and second information are received by a mobile communication terminal.

41. (currently amended) An apparatus for receiving information in a mobile communication network comprising:

a search mechanism for searching a slot in a ~~first~~-communication cycle for first information indicating the position of a- second information in a target slot in-a ~~second~~-the communication cycle; and

a retrieving mechanism for retrieving the second information from the target slot based on the ~~first~~ information.

wherein the first information and the second information are received as part of a general page message transmitted over a single paging channel, such that the apparatus searches for the first information and the second information in a single communication cycle.

42. (currently amended) The apparatus of claim 41, wherein the second information is- comprises a message information.

43. (currently amended) The apparatus of claim 41, wherein the first information further indicates the presence of the second information in the ~~second~~-communication cycle.

44. (currently amended) The apparatus of claim ~~41~~ 42, wherein the ~~second~~ information-comprises a-text message.

45. (currently amended) The apparatus of claim 41, wherein the second information comprise a ~~mobile~~-short message.

46. (cancel)

47. (currently amended) The apparatus of claim 45, wherein the ~~mobile~~-short message is transmitted in a data burst message.

48. (original) The apparatus of claim 41, wherein the first and second information are transmitted over a general paging channel from a mobile communications network.

49. (original) The apparatus of claim 41, wherein the apparatus is a mobile communication terminal.

50. (currently amended) The apparatus of claim ~~44~~49, wherein the mobile communication terminal is in communication with a mobile base station.

51-60 (cancel)

61. (currently amended) An apparatus for transmitting information in a mobile communication network comprising:

means for transmitting a first information in a first-communication cycle having a first plurality of time slots; and

means for transmitting a second information in a ~~second~~the communication cycle ~~having a second plurality of time slots,~~

wherein the first information indicates position of the second information in a target slot in said ~~second~~ plurality of time slots, such that the second information can be retrieved from the target slot in said ~~second~~-communication cycle based on the first information,

wherein the first information and the second information are transmitted in a general page message over a single paging channel, such that a mobile communication terminal searches for the first information and the second information in a single communication cycle.

62. (currently amended) An apparatus for transmitting information in a mobile communication network comprising:

a transmitter wherein the transmitter transmits a first information in a first communication cycle having a first-plurality of time slots and for transmitting a second information in a ~~second~~the same communication cycle ~~having a second plurality of time slots,~~ wherein the first information indicates position of the second information in a target slot in said ~~second~~ plurality of time slots, such that the second information can be retrieved from the target slot in said ~~second~~-communication cycle based on the first information,

wherein the first information and the second information are transmitted in a general page message over a single paging channel, such that a mobile communication terminal searches for the first information and the second information in a single communication cycle.
